PERFORMANCE TRIANGLE

ATHLETE PROFILE

### ENDURANCE-LEANING PROFILE

Strongest on endurance terrain (index 73/100), with descent mastery the limiting dimension (index 58/100). A measurable decline appeared in the second half without a full collapse in output.

PRIMARY STRENGTH

**Endurance** — highest normalized index of the three dimensions (73/100).

LIMITING FACTOR

**Descent Mastery** — index 58/100, lowest point at Discesa Forcella Aurine.

RACE CHARACTER

**POSITIVE START, SECOND-HALF ATTRITION**

## PERFORMANCE & FATIGUE

### VPI

VERTICAL POWER INDEX

**654.2 m/h**

1ST HALF

**691.4 m/h**

2ND HALF

**601.8 m/h**

DEGRADATION -13.0%

### DMI

DESCENT MASTERY INDEX

**7.33 km/h**

1ST HALF

**8.4 km/h**

2ND HALF

**6.3 km/h**

DEGRADATION -25.0%

### ER

ENDURANCE RATING

**72.8**

1ST HALF

**13.6 min/km**

2ND HALF

**19.4 min/km**

PACE CHANGE +42.6%

# THE RACE, EXPLAINED BY DATA

- 01

**OPENING**  
 The race opened with the strongest climbing output of the day: 748 m/h on Rifugio Auronzo, well above the eventual race-average VPI. Position moved from 65-range toward the front third inside the first quarter of the course, supported by an ER index above 96 in the opening segments.
- 02

**TURNING POINT**  
 Around km 90, climbing and descending indices decline together — VPI index drops to 61 and DMI index to 55, the first point in the race where both terrain dimensions move down at the same time. The clearest inflection point in the race sits near km 90, where position and performance indices move together.
- 03

**CLOSING**  
 From this point, effort pace slows from 13.6 to 19.4 min/km (42.6% change), and VPI falls 13.0% while DMI falls 25.0% between race halves. Position stabilizes rather than continuing to fall, closing at #71 after a low point of #104.

## KEY SEGMENTS

| SEGMENT                                                     | DIST (KM)     | SLOPE  | VPI | DMI | ER IDX | SIGNAL                                                                           |
|-------------------------------------------------------------|---------------|--------|-----|-----|--------|----------------------------------------------------------------------------------|
| <b>BEST CLIMB</b><br>Rifugio Auronzo                        | 4.1 - 8.0     | +17.2% | 748 | —   | 91     | Strongest sustained climbing effort of the race, in the opening third.           |
| <b>WORST CLIMB</b><br>Forcella Aurine                       | 99.4 - 104.8  | +15.8% | 489 | —   | 41     | Climbing output dropped well below race average under accumulated fatigue.       |
| <b>BEST DESCENT</b><br>Discesa Rifugio Auronzo              | 8.0 - 11.6    | -14.6% | —   | 9.4 | 89     | Fastest technical descent, executed early with fresh legs.                       |
| <b>WORST DESCENT</b><br>Discesa Forcella Aurine             | 104.8 - 109.1 | -13.9% | —   | 5.1 | 38     | Descent speed nearly halved versus the opening descents.                         |
| <b>LARGEST DEGRADATION</b><br>Passo Giau -> Forcella Aurine | 90.0 - 99.4   | +12.4% | 562 | 5.9 | 47     | Sharpest simultaneous drop in climbing and descending indices in the race.       |
| <b>BEST RECOVERY</b><br>San Vito di Cadore                  | 108.0 - 116.0 | +9.8%  | 548 | 5.6 | low n  | Short stabilization before the finish; sample too short for a firm VPI/DMI read. |

# VERTICAL TRAIL LABS ASSESSMENT

## ATHLETE PERFORMANCE SUMMARY

Wayne Walsh's race data fits an endurance-leaning profile, driven by an endurance index of 73/100 against a descent mastery index of 58/100. The clearest performance cost came from descending, which declined furthest as the race progressed. Fatigue resistance was moderate: VPI fell 13.0% and DMI fell 25.0% between race halves, alongside a 42.6% slowdown in effort pace. Position tracked this decline directly, moving from a best of #65 to a low of #104 before stabilizing at the km 90 mark. The defining characteristic of the race was a strong, front-loaded climbing performance that outpaced the athlete's ability to sustain descending output and pace to the finish.

## KEY TAKEAWAYS

- 01** Endurance was the defining strength, anchored by an ER index of 91 on Rifugio Auronzo.
- 02** Descent Mastery capped overall performance, falling furthest under fatigue, with 5.1 km/h on Discesa Forcella Aurine.
- 03** Km 90 marked the race's defining moment, where climbing and descending output declined together and position began to fall.
- 04** Second-half pacing decay, not a single bad segment, was the main performance characteristic of the race.

## METHODOLOGY

### VPI

#### Vertical Power Index

Uphill efficiency on steep climbing terrain.

### DMI

#### Descent Mastery Index

Downhill speed and technical efficiency.

### ER

#### Endurance Rating

Terrain-adjusted endurance and fatigue resistance.

Raw metrics retain their original units. Normalized indices are used for visual comparison.
