ATHLETE PROFILE

DESCENT MASTERY SPECIALIST

Strongest on descent mastery terrain (12.42 km/h), with vertical power the limiting dimension (983.7 m/h). Performance indices held close to first-half levels through to the finish.

PRIMARY STRENGTH

Descent Mastery — 12.42 km/h, peaking on P18.0→P22.0.

LIMITING FACTOR

Vertical Power — 983.7 m/h, lowest point at P28.0→P30.0.

FINAL POSITION

#20

01 OPENING

The race opened with the strongest climbing output of the day: 1593.3 m/h on P18.0→P22.0, well above the eventual race-average VPI. Position moved from 19-range toward the front third inside the first quarter of the course, supported by an ER index above 100.0 in the opening segments.

02 TURNING POINT

Around km 74, climbing and descending indices decline together — VPI index drops to 70.4 and DMI index to 67.1, the first point in the race where both terrain dimensions move down at the same time. The clearest inflection point in the race sits near km 74, where position and performance indices move together.

03 CLOSING

From this point, effort pace slows from 4.09 to 4.91 min/km (20.3% change), and VPI falls 12.7% while DMI falls 18.3% between race halves. Position stabilizes rather than continuing to fall, closing at #20 after a low point of #47.

KEY SEGMENTS

SEGMENT	DIST (KM)	SLOPE	VPI	DMI	ER IDX	SIGNAL
BEST CLIMB P18.0→P22.0	62.9 - 69.8	-7.8%	1593.3	22.02	low n	Strongest climbing output of the race on this segment.
WORST CLIMB P28.0→P30.0	83.2 - 83.3	+9.0%	109.7	—	9	Climbing output dropped furthest below this runner's own race average here.
BEST DESCENT P18.0→P22.0	62.9 - 69.8	-7.8%	1593.3	22.02	low n	Fastest technical descent of the race on this segment.
WORST DESCENT P82.0→P200.0	169.2 - 176.2	-15.3%	511.9	7.65	62	Descent speed dropped furthest below this runner's own race average here.
LARGEST DEGRADATION P22.0→P24.0	69.8 - 73.8	+11.1%	869.7	11.9	67	Sharpest simultaneous drop in climbing and descending indices in the race.
BEST RECOVERY P64.0→P82.0	157.9 - 169.2	+4.5%	859.7	11.8	66	Climbing and descending indices ticked back up here rather than continuing to fall.

VERTICAL TRAIL LABS ASSESSMENT

ATHLETE PERFORMANCE SUMMARY

Santos Gabriel RUEDA's race data fits a descent mastery specialist, driven by a descent mastery of 12.42 km/h against a vertical power of 983.7 m/h. The clearest performance cost came from climbing, which declined furthest as the race progressed. Fatigue resistance was strong: VPI fell 12.7% and DMI fell 18.3% between race halves, alongside a 20.3% slowdown in effort pace. Position tracked this decline directly, moving from a best of #19 to a low of #47 before stabilizing at the km 74 mark. The defining characteristic of the race was a strong, front-loaded climbing performance that outpaced the athlete's ability to sustain descending output and pace to the finish.

KEY TAKEAWAYS

- 01** Descent Mastery was the defining strength, anchored by 22.02 km/h on P18.0→P22.0.
- 02** Vertical Power capped overall performance, falling furthest under fatigue, with 109.7 m/h on P28.0→P30.0.
- 03** Km 74 marked the race's defining moment, where climbing and descending output declined together and position began to fall.
- 04** Second-half pacing decay, not a single bad segment, was the main performance characteristic of the race.

METHODOLOGY

VPI

Vertical Power Index

Uphill efficiency on steep climbing terrain.

DMI

Descent Mastery Index

Downhill speed and technical efficiency.

ER

Endurance Rating

Terrain-adjusted endurance and fatigue resistance.

Raw metrics retain their original units. Normalized indices are used for visual comparison.
